

Cloud Security Configuration Review

A 501CISO Assessment

THE RISK HIDING IN PLAIN SIGHT

Most breaches today don't start with a zero-day exploit — they start with a misconfigured setting. An overly permissive storage bucket. A conditional access policy that was never enforced. An admin role granted "temporarily" two years ago and never revoked. For **associations and nonprofits** managing donor data, member records, financial systems, and grant compliance obligations across sprawling cloud environments, a single overlooked setting can mean a data breach, a failed audit, or a lost grant.

Cloud misconfiguration is now one of the leading causes of cloud security incidents — and it's almost entirely preventable with the right visibility.

WHAT WE DO

501CISO's Cloud Security Configuration Review uses Prowler, an industry-leading open-source cloud security auditing platform, to systematically scan your organization's cloud environments against hundreds of security best-practice checks - mapped to CIS Benchmarks, NIST, and other recognized frameworks.

Amazon Web Services

615

checks · 86 services

Microsoft Azure

190

checks · 22 services

Google Cloud Platform

109

checks · 20 services

Microsoft 365

109

checks · 10 services

Every check evaluates a specific configuration setting — identity and access controls, data encryption, network exposure, logging and monitoring, and more — against established security benchmarks.

Executive Summary Report

A leadership-level overview of your cloud security posture — overall risk rating, critical findings at a glance, and trends by environment. Built for boards, executive directors, and audit committees who need the picture without the jargon.

Detailed Findings & Remediation Guide

A full technical breakdown of every configuration gap identified, organized by severity and environment, with clear, actionable remediation steps your IT team or MSP can execute directly.

WHY 501CISO

Associations and nonprofits don't need generic IT security reports — they need governance-ready findings that speak to leadership and boards, paired with technical detail their IT teams can act on immediately. That's the gap this assessment closes.

IDEAL FOR

- Associations and nonprofits preparing for a cyber insurance renewal or funder/member security questionnaire
- Organizations that migrated to the cloud without a formal security review
- Boards, EDs, and executives who need assurance without becoming technical experts

GET STARTED

\$999 per scan, per environment

Choose one environment or bundle across AWS, Azure, GCP & Microsoft 365
